

Course Outline

Aspects International

Practical Environmental Management Programme

A Series of Practical Training Sessions to help you improve your Environmental Performance

Introduction

Aspects is offering a series of training days designed to help you manage your resource use and reduce your carbon emissions. Comprising of six separate one day training days, the programme is designed to give you the knowledge to understand and quantify your organisation's environmental impact and identify opportunities for improvement.

Carbon Footprinting

This course helps you to start calculating and reducing the carbon footprint of your organisation, product or service and achieve environmental improvements and cost savings.

Energy and Water Management

Energy and water are a necessary prerequisite for all businesses but are also expensive both in terms of direct financial costs and the environmental costs. This course can help you manage these vital resources achieving environmental and financial cost savings.

Waste & Recycling Management

Waste management and minimisation is an important area in which all organisations can make improvements. This course helps businesses to “move up the waste hierarchy” to encompass greater re-use and recovery of value from waste.

Monitoring and Targeting

Monitoring and Targeting is a vital approach to managing resources more effectively. The concept that “if you don't measure it, can you cant manage it” is entrenched in the philosophy of monitoring and targeting. This course will enable you to set up a monitoring system from which environmental improvements can be made.

Environmental Management Systems

An overview of the main Environmental Management Systems; what they mean, what the benefits are and how to implement them.

Environmental Auditing

An audit is a management tool to provide information on an organisation's performance to the right people at the right time, enabling decisions to be made and actions to be taken. This course introduces you to auditing and its use as an environmental management tool.
